Hi, in this small guide I will tell you how to open and use the code.
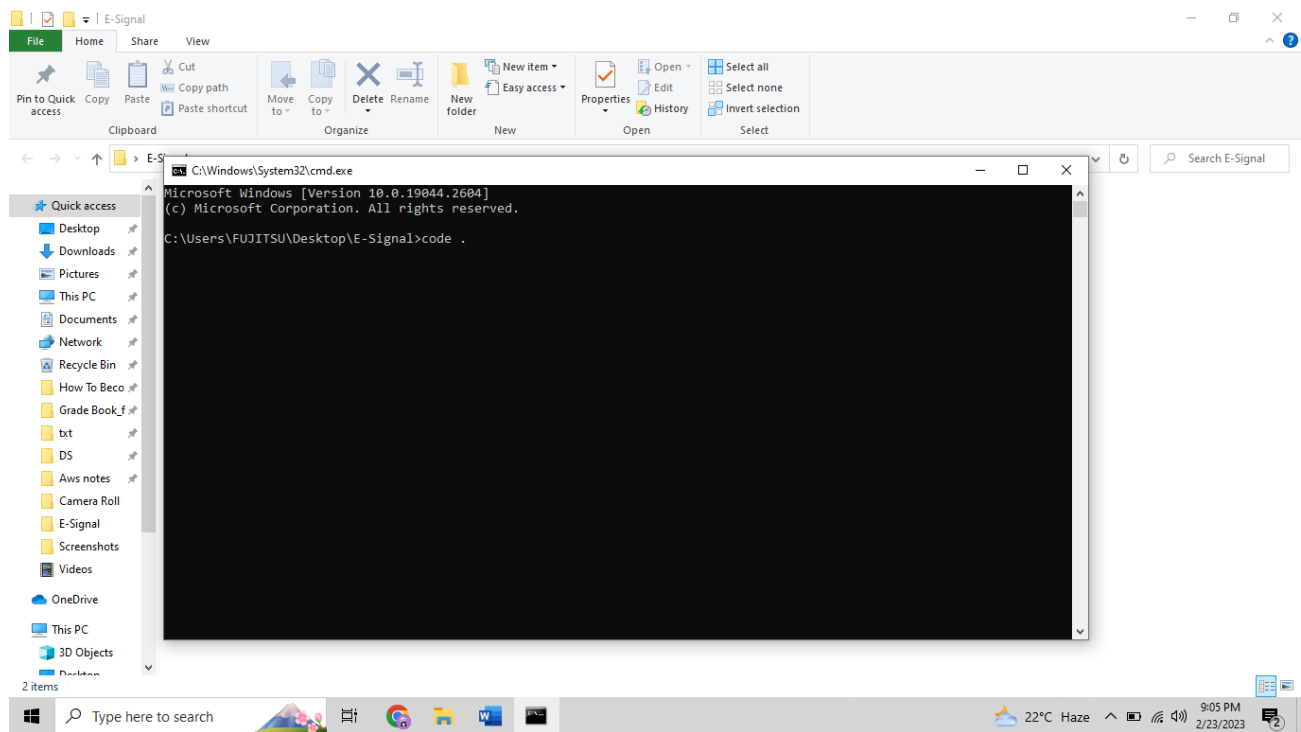

Step 1.

Open the folder where is excel file and code is saved and type cmd in bar. You can see in the image.

Step 2:

After typing cmd you will see cmd window on your desktop. Now type command " code ." hit enter button. now vs code will open you can run the code.

Hopefully code will run on your computer and completing the task. If you get any error feel free to message me Thanks.

Note:- Make sure e-signal is running on your desktop.
